

1 Quijote final path

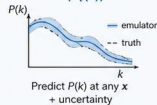

(truth for training and validation)

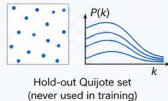

Residual-anchor PCA-GP

Final emulator ($U_t(x)$)

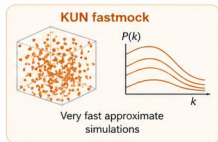

Fixed LHS256 validation

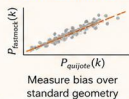

2 Auxiliary KUN path

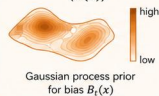

(auxiliary acquisition signal only)

Standard-geometry bias measurements

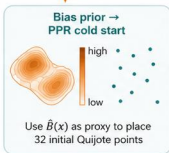

Continuous bias prior ($\hat{B}(x)$)

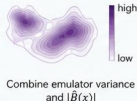

feeds only bias prior (not training data)

3 Design & active learning

(using bias prior as acquisition signal)

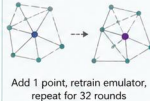

Variance-bias score ($S_t(x)$)

Delaunay simplex search

One point per round $\times 32$

Final 64-point design

Quijote truth path
(training & validation)

Auxiliary fastmock path
(bias prior only)

Active learning loop
(bias-guided design)

Final training set feeds
Quijote emulator

Quijote
truth

KUN
auxiliary
